

# AIDS vaccine nears human testing

**A University of Kansas Medical Center researcher hopes to get the funds needed for the next step in developing his AIDS vaccine -- testing on humans.**

Attention is focused on the university's Bill Narayan whose experimental vaccine kept monkeys from getting sick after being infected with a variety of the AIDS virus, The Kansas City (Mo.) Star said. A study on the vaccine appeared this month in the journal Virology.

Narayan is waiting for word from the National Institutes of Health on whether he will get the \$20 million needed to manufacture the vaccine and test it on people.
